THE PROBLEM

The rapid growth of internet data has surpassed the processing capability of the human analyst. Those tasked with identifying and confronting threats need a technology solution that can augment the human capacity to sort data correlated with risk. Derogatory information is often buried by general-purpose search engines, which only index about 5% of the internet.

Patent Pending BehavioralTech

Giant Oak combines technology and behavioral science to help government agencies identify and act on potential threats.

THE SOLUTION

Giant Oak's cutting-edge search technology, GOST®, re-indexes the internet to allow investigators to screen individuals and organizations quickly and efficiently, as well as sort entities by the level of information indicative of specific threats. **GOST® is the only domain-specific search tool enabling large-scale, high-speed screening and continuous evaluation.**

GOST® has been successfully used by the **Department of Defense, Homeland Security, Law Enforcement and non-governmental organizations (NGOs)** for counter-terrorism efforts, counter- trafficking efforts and other national security issues.

Making the World Safer

Our results foster a safer and freer society by helping organizations see a clearer picture of the people with whom they transact and enable easier and smarter decision-making while reducing cost, time, and error.

Intelligent Ranking Software

GOST

Giant Oak Search Technology (GOST®) is the fastest, most reliable behavioral search tool on the market. Our expert software rapidly ranks actions, actors, and communities during the online search and screening process by applying machine analysis to data generated by human behavior.

GIANT OAK
We see the people behind the data.
